March 2024	Hach HQ440d Multiparameter ISE kit (Chloride & Nitrate)	4,328.00
December 2024	Solinst Discrete Interval Sampler	2,001.74
December 2024	Hach DR900 Multiparameter Portable Colorimeter	1,992.40
<b>Total</b>		<b>3,690,326.14</b>

## 2023 Financial Audit

As of the date of this annual report, the 2024 financial statements have not yet been audited in accordance with K.S.A. 75-1120a. However, the 2023 audit report is attached for reference as Attachment A.

# 2025 ADOPTED BUDGET

## BIG BEND GROUNDWATER MANAGEMENT DISTRICT NO. 5

### ADOPTED 2025 BUDGET

#### EXPENDITURES

##### PERSONNEL SERVICES

SALARIES	\$	280,000.00
EMPLOYEE BENEFITS	\$	56,000.00
PAYROLL TAXES	\$	28,000.00

##### ADMINISTRATION

PRINTING & PUBLICATIONS	\$	20,000.00
TRAVEL & CONFERENCE	\$	18,000.00
UTILITIES	\$	15,000.00
FIELD EQUIPMENT	\$	10,000.00
BUILDING EXPENSE	\$	10,000.00
OFFICE SUPPLIES	\$	5,000.00
OFFICE EQUIPMENT	\$	5,000.00

##### OTHER EXPENSES

WATER MANAGEMENT	\$	1,000,000.00
PROFESSIONAL FEES	\$	500,000.00
WEATHER STATION EXPENSE	\$	19,000.00
INSURANCE	\$	16,000.00
POSTAGE	\$	2,000.00
OTHER	\$	2,000.00
BUSINESS DINNERS	\$	1,500.00
DUES & MEMBERSHIPS	\$	750.00

TOTAL BUDGET \$ 1,988,250.00

PER ACRE	\$	0.05
PER ACRE-FOOT	\$	2.00

# ACTIVITIES

## Description of Activities

Throughout FY2024, the District has worked closely with local, state, and federal agencies to develop long-term solutions for a sizable portion of the region. This includes facilitating projects to bring groups together that, at times, have significantly different points of view on issues. Meanwhile, internally, District staff has spent considerable time working with individual water users to identify beneficial conservation programs, troubleshoot problems with diversion works, and providing important datasets for public use. The District relies heavily on data collected by District staff throughout the calendar year. This information is utilized not only by local water users but also state and federal entities in evaluating the health of the local aquifer. The District is actively engaged in several complex priority projects that require large investments of time and resources.

### *Watershed Plan -Environmental Impact Statement Development*

In 2024, the District's contractor (Olsson), in coordination with USDA-NRCS and District staff, have conducted hundreds of meetings and invested thousands of hours to move the fully funded PL-566 Watershed Plan-Environmental Impact Statement from preliminary concepts and drafts to a completed draft plan. The draft plan encompasses a thorough evaluation of a variety of alternatives for the long-term agricultural water management within the Rattlesnake Creek region and to meaningfully address the Quivira NWR impairment. The draft plan has undergone initial stakeholder scoping and comments followed by thorough evaluation by state and federal agencies. Olsson worked throughout 2023 to collect pertinent information including, but not limited to, hydrological, economic, and environmental data. These datasets have been analyzed and compiled into the draft plan that has undergone technical review by USDA-NRCS staff in Kansas and at the National Water Management Center in Arkansas. In 2024, Olsson worked diligently to update the draft plan based on comments and recommendations made by USDA staff following this technical review. The draft plan has been submitted to USDA-NRCS for administrative review. Following USDA-NRCS review and appropriate revisions by Olsson, the draft plan will undergo a second round of public review and comment in early spring 2025. The overall Watershed Plan-Environmental Impact Statement document is anticipated to be finalized in the first half of 2025.

### *Short-Term Water Resource Availability for Quivira NWR*

In 2024, the District has been an active participant in the stakeholder working group convened by KDA-DWR to put together short-term projects to provide “measurable progress” toward addressing the impairment at Quivira NWR. The group met several times throughout the year and put together several pilot projects, including pilot augmentation of streamflow, water bank deposit compensation (CAMP), water right offsets and a proposed water conservation area. Based on these efforts by the working group, KDA-DWR determined that broad administration of water rights in the region would not be necessary in 2025. Currently, the working group is continuing to conserve water in the region while larger long-term projects are not yet available to the region.

### *Water User Assistance*

On a daily basis, the District receives calls, visits or other correspondence from area water users requesting assistance from staff for addressing individual concerns. These concerns range from inquiries regarding how much water has been used within the calendar year, water meter compliance, water quality concerns, and further program-specific questions.

### *Hydrologic Data Collection*

Since the District’s formation, data collection has been central to the District’s priorities. The District owns and maintains its own weather station network to provide real time weather data to area water users. This data is utilized throughout the growing season for irrigation scheduling, so water is applied to the growing crops when necessary and is strategic in the timing of this application. In 2024, District staff continued to gather hundreds of water level measurements throughout the region to maintain a good understanding of the water quantity in the local aquifer. A specific area of focus this year has been to increase the awareness of water quality within the local aquifer. The District has been coordinating with KSU researchers for several years to collect water quality data from private well owners and to promote a better understanding of the existing conditions. In 2024, the District brought an internal water quality lab online to provide a quick assessment of chloride and nitrate concentrations from water samples provided by the public. The District provides free water sampling bottles with clear instructions for proper collection of the sample. Once the water sample is brought into the District’s water lab, District staff analyze the sample and provide the results free of charge. This is a quick method for gathering and providing critical data regarding water quality in this region. The District will continue to provide this service in 2025.

## **How Expenditures Conserve and Reduce Consumptive Use of Water**

The District continues to wrestle measuring the success of its various programs over the years to conserve water. The reality is that in this region of Kansas, water conservation looks different than in areas of limited aquifer supply. In the Great Bend Prairie aquifer region, the Kansas Geological Survey has recently indicated that the aquifer is within 1.6% of being long-term sustainable. This does not mean that there is nothing to do in the region. Rather, we are tasked with maintaining the water quantity and quality in this region. This becomes a more monumental task when considering that the District corresponds with a transition zone of intermittent and perennial streamflow.

### *Efficient Water Use & Spatial Water Re-Allocation*

The District utilizes programs to promote efficient water use such as the Central Kansas Water Bank Association (CKWBA), the weather station network for irrigation scheduling, and the water flow meter compliance program. Since the District has been closed to new appropriations for thirty years, the District has pursued programs to facilitate movement of water throughout the region. The District currently has regulations (K.A.R. 5-25-18 & K.A.R. 5-25-22) and programs (CKWBA) in place that allow for movement of water over long distances within District boundaries while requiring conservation and considering the specific hydrologic conditions of the area.

### *Long-Term Water Resource Availability for Quivira NWR*

In the Rattlesnake Creek region, the District is working with its consultant, Olsson, to complete the Watershed Plan-EIS. This plan is evaluating a suite of solutions previously suggested by various stakeholder groups and agencies to put forward a long-term sustainable resolution to the longstanding water resource concerns in the region. As the Watershed Plan-EIS document is still considered draft, it is not yet public so details cannot be included in this report.

### *Additional Efforts*

Beyond the Watershed Plan-EIS process, the District has expended millions of dollars to retire water rights and secure lands to conduct site-specific hydrologic studies. These efforts are focused on evaluating the best data available to reduce the water stresses impacting Rattlesnake Creek streamflows and water resource availability at Quivira NWR.

## **Prevention of Economic Deterioration and Stabilization of Agriculture**

This issue is one of significant consideration in the Rattlesnake Creek region. Over the past several years, there have been plans considered or proposed that, based on recent economic

studies, would have a significant impact on the local economy of Stafford County. While politically complicated, the District has been meeting with state and federal officials to determine the appropriate course of action to minimize the impact on the agricultural economy while providing a reliable and sustainable water resource for the management goals and objectives for Quivira NWR.

## **Other Activities from the Management Program**

### *District Hydrologic Modeling*

In 2008, the District contracted with Balleau Groundwater Inc. (BGW) to construct a hydrogeologic model for the entire District plus the upstream drainage basins that generate the District supply. Over the following two years, the BGW worked with District staff and a Technical Advisory Committee to develop this hydrogeologic model of the regional aquifer system. The group had two primary tasks:

1. Clarify the relationship between alternative management actions and the resultant hydrologic conditions to the aquifer and streams.
2. Provide a tool capable of addressing questions of watershed management, aquifer sustainability, source-water accounting and conditions of the aquifer and streams.

The District's model has been utilized by several agencies to consider the effects of water management changes on the local aquifer and stream systems. In 2023, the District directed BGW to refine and update the model with up-to-date data and information using the most recent revisions of MODFLOW. The update has been completed and BGW is currently working on a report to document the updates and modifications.

### *Aquifer Water Quality*

The water quality of the Great Bend Prairie aquifer has been monitored and studied for several years. Specifically, the District and the Kansas Geological Survey partnered in the 1990s to get a better understanding of the naturally occurring chloride concentrations in the Eastern half of the District. This area has been referred to as the "Mineral Intrusion Area." The District has regulations in place to monitor this area. In recent years, the District has worked with Kansas State University researchers to collect and analyze water samples for nitrate concentrations. To date, these samples have shown elevated levels of nitrates in the aquifer, but further sampling and assessment is needed to determine a proper course of action. The District has secured water sampling and analysis equipment to assist public and private water users with

determining the water quality from regional water wells. The District is escalating efforts to encourage all water users, public and private to have their water wells tested.

#### *Central Kansas Water Bank Association*

Water banking originated out of the Quivira/Rattlesnake Creek Partnership Plan as part of a collective effort to reduce water use in that subbasin. As the program developed, it became apparent that it could be applied in all of the subbasins in the District. The Central Kansas Water Bank Association (CKWBA) is a not-for-profit corporation operated by the same staff but overseen by an independent board of directors. The CKWBA has two distinct programs for providing flexibility to area water users while requiring water conservation. The first program (Savings Account) allows a portion of unused water to be preserved for future use at the same location. The second program (Deposit & Lease) is for the transfer of the historical water use of a water right(s) to other areas within the same subbasin. These programs have gained in popularity and give water users added water use flexibility while conserving water. The CKWBA has adopted a new charter to significantly improve water conservation across the region while providing flexibility for water use. In addition to these efforts, the CKWBA has provided the framework needed to implement the Compensated Allocation Management Program (CAMP) for the working group effort in the Rattlesnake Creek region. CKWBA has facilitated nearly 2,000 acre-feet of streamflow benefit and is the largest contributor to the measurable progress in the working group.

# ACTION PLAN (2025)

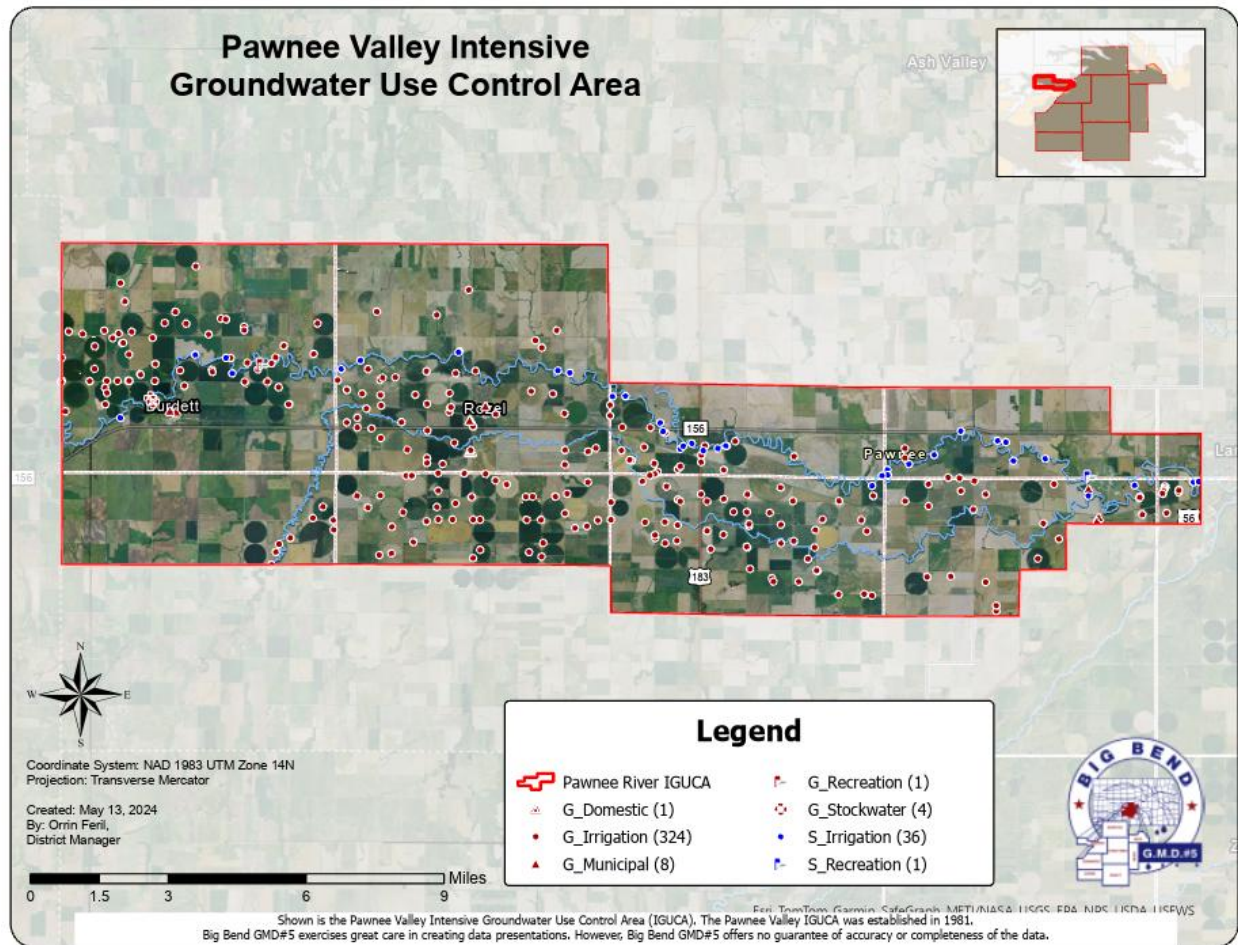

## Summary

The District has implemented a variety of programs to address hydrologic issues throughout the region since the inception of the District in 1976. Early in the District's history this involved the development of the District's management program which resulted in the establishment of several policies and regulations that laid the foundation for the current hydrologic conditions of the region. These included strict monitoring of water use with flow meters, well spacing requirements, discouragement of waste of water and encouragement of the re-used water sources. Recently, the Kansas Geological Survey published a technical publication which indicated the District is within 1.6% from sustainable water level fluctuations (Whittemore, Butler, Jr., & Wilson, 2023). This study looks at the average annual water level fluctuations in comparison to the annual withdrawals from the aquifer through well diversions. This does not, however, indicate that there are no issues still to address within the region but rather the goal of long-term sustainability is within reach for the region. As the District works through this process, there are two subsections below: 1) Priority Areas of Concern and 2) Supplemental Areas Under Consideration. These areas have been submitted and accepted by the Chief Engineer per K.S.A. 82a-1044 in July 2024.

## Priority Areas of Concern

### Water Quantity

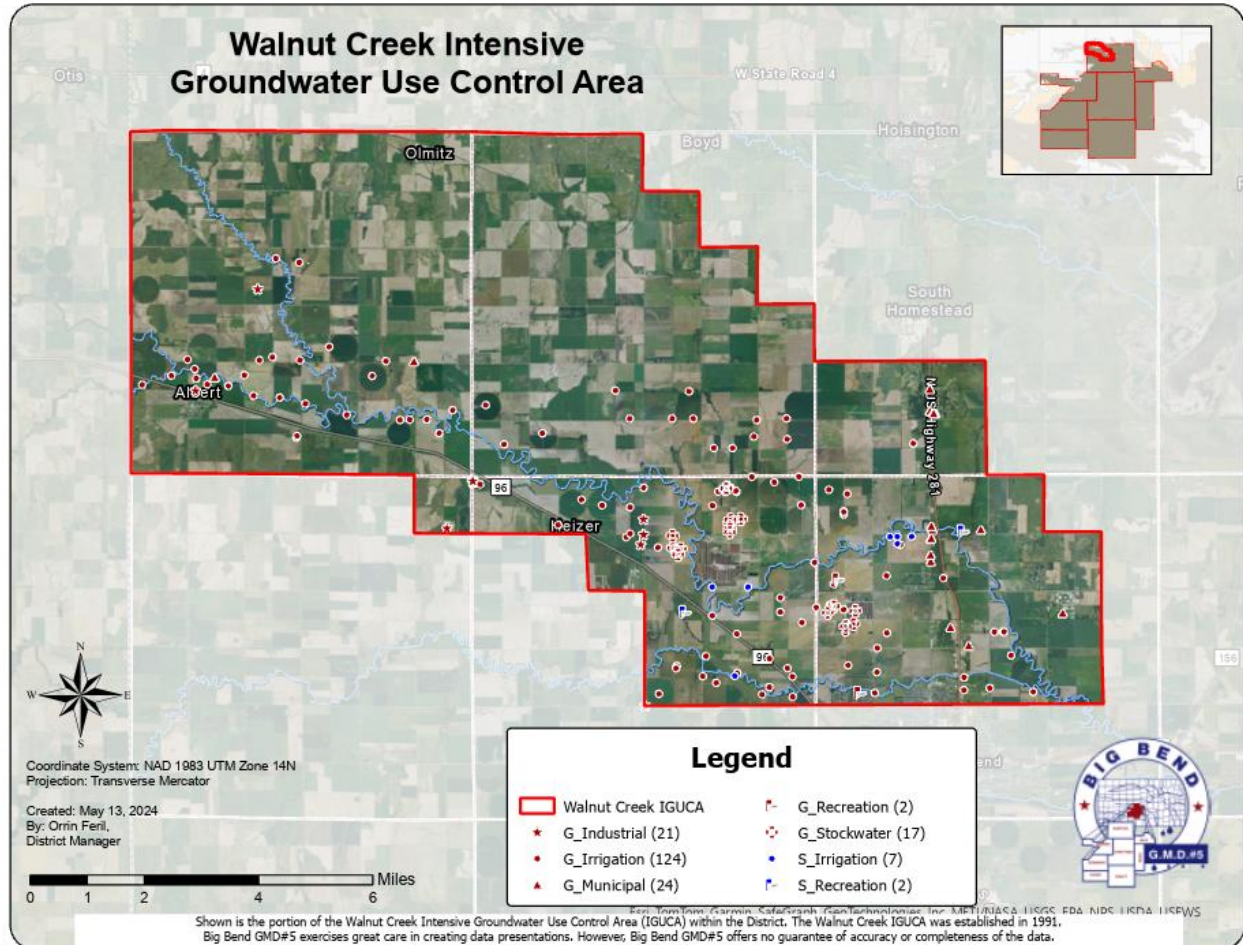

#### Pawnee Valley Intensive Groundwater Use Control Area

In 1980, the District noted declining water levels in the region upstream from the City of Larned along the Pawnee River. Accordingly, the District requested that the Chief Engineer initiate proceedings for an Intensive Groundwater Use Control Area (IGUCA). Following public hearings in late 1980, the Chief Engineer issued the Pawnee Valley IGUCA order. In the years since its establishment, this order has been amended twice by KDA-DWR at the request of the District. In 2007, the Phase I order was issued to expand the IGUCA to the upstream watershed to the west. However, this expansion has not taken place at this point. The Kansas Department of Agriculture - Division of Water Resources maintains a website with a useful timeline and details regarding the corrective controls and copies of the Pawnee Valley IGUCA orders (Department of Agriculture, 2007).

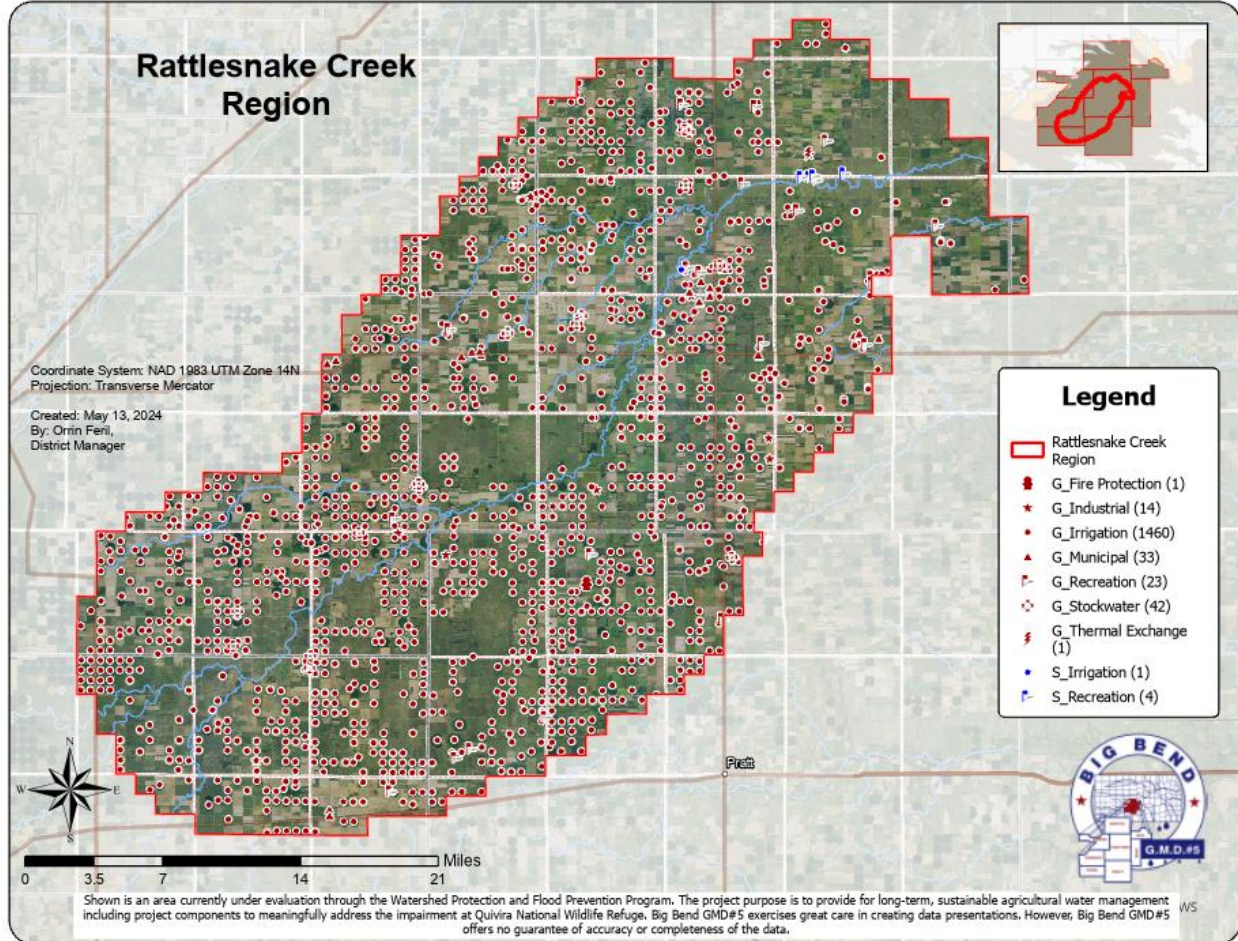

## Walnut Creek Intensive Groundwater Use Control Area

In early 1990, in response to reports from KDA-DWR, the Kansas Department of Wildlife and Parks, along with the District, requested the Chief Engineer initiate proceedings for an IGUCA in the watershed upstream of Cheyenne Bottoms Wildlife Area. There were concerns that the water withdrawals from the watershed had negatively impacted the groundwater levels to an extent that Walnut Creek was negatively affected thus limiting the supply of water to Cheyenne Bottoms. Following public input and formal public hearings throughout 1990 and 1991, the Chief Engineer established the Walnut IGUCA in portions of Rush, Ness, and Barton counties. The Kansas Department of Agriculture - Division of Water Resources' website has another useful timeline with details regarding the corrective controls and copies of the Walnut Creek IGUCA orders (Department of Agriculture, 2021).

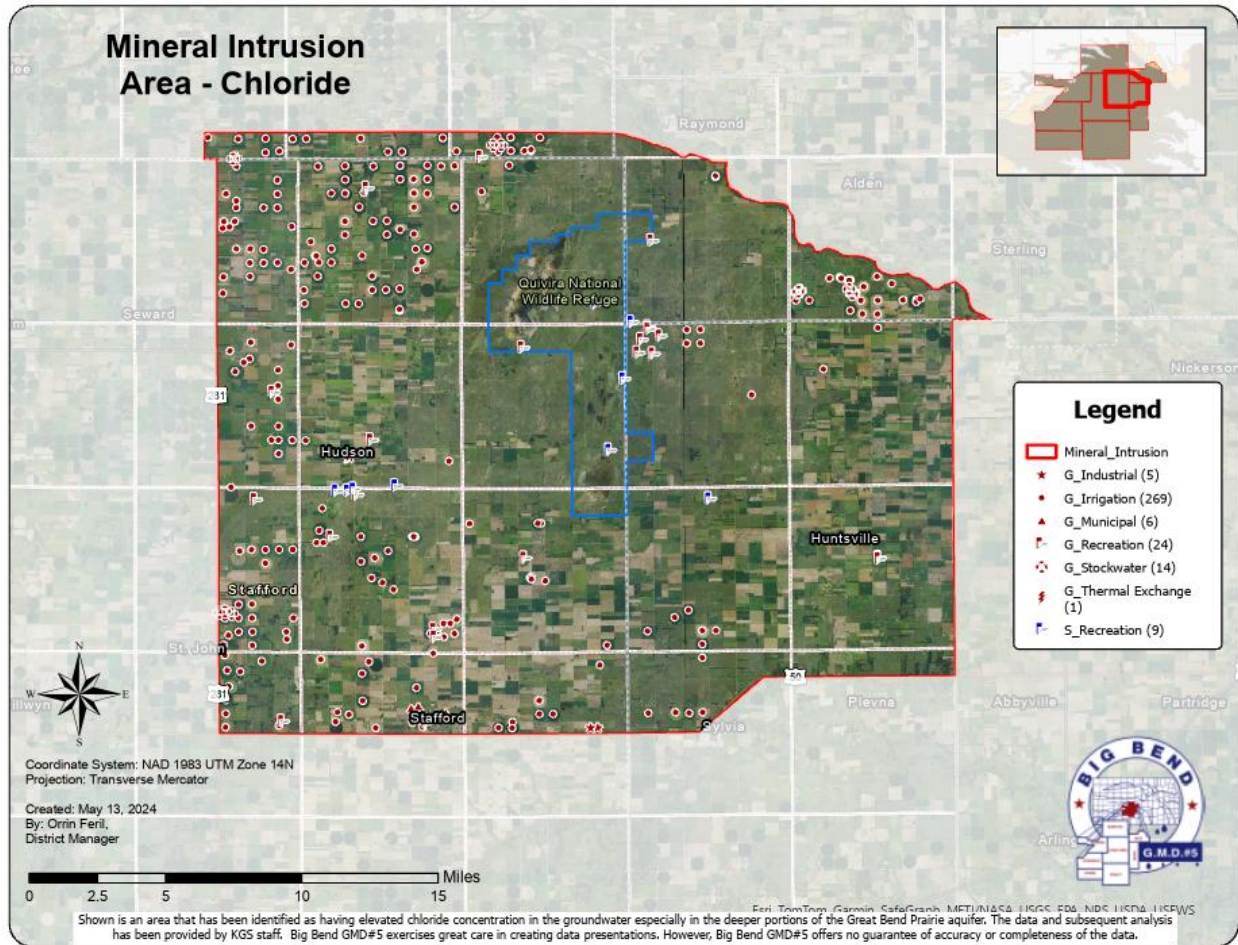

## Rattlesnake Creek Region

For several years, the District has been working with local, state, and federal agencies to develop a long-term sustainable program to address the water resource needs at Quivira National Wildlife Refuge (“Refuge”) in Stafford County. Since 2020 the District has contracted with Olsson to conduct a thorough evaluation of several alternatives for water management issues in the Rattlesnake Creek region. This highly anticipated work is nearing completion and will provide the long-term sustainable program to the region that is largely funded by USDA-NRCS funds through the Watershed Protection and Flood Prevention Program. Currently the draft plan is being reviewed by NRCS before being provided for public review and comment. Meanwhile, the Kansas Department of Agriculture - Division of Water Resources has initiated a working group of stakeholder organizations to coordinate efforts to implement short-term projects for providing water use conservation and/or streamflow improvements. The District is involved in this working group effort while finalizing the larger long-term resolution for the region.

Water Quality  
Chloride

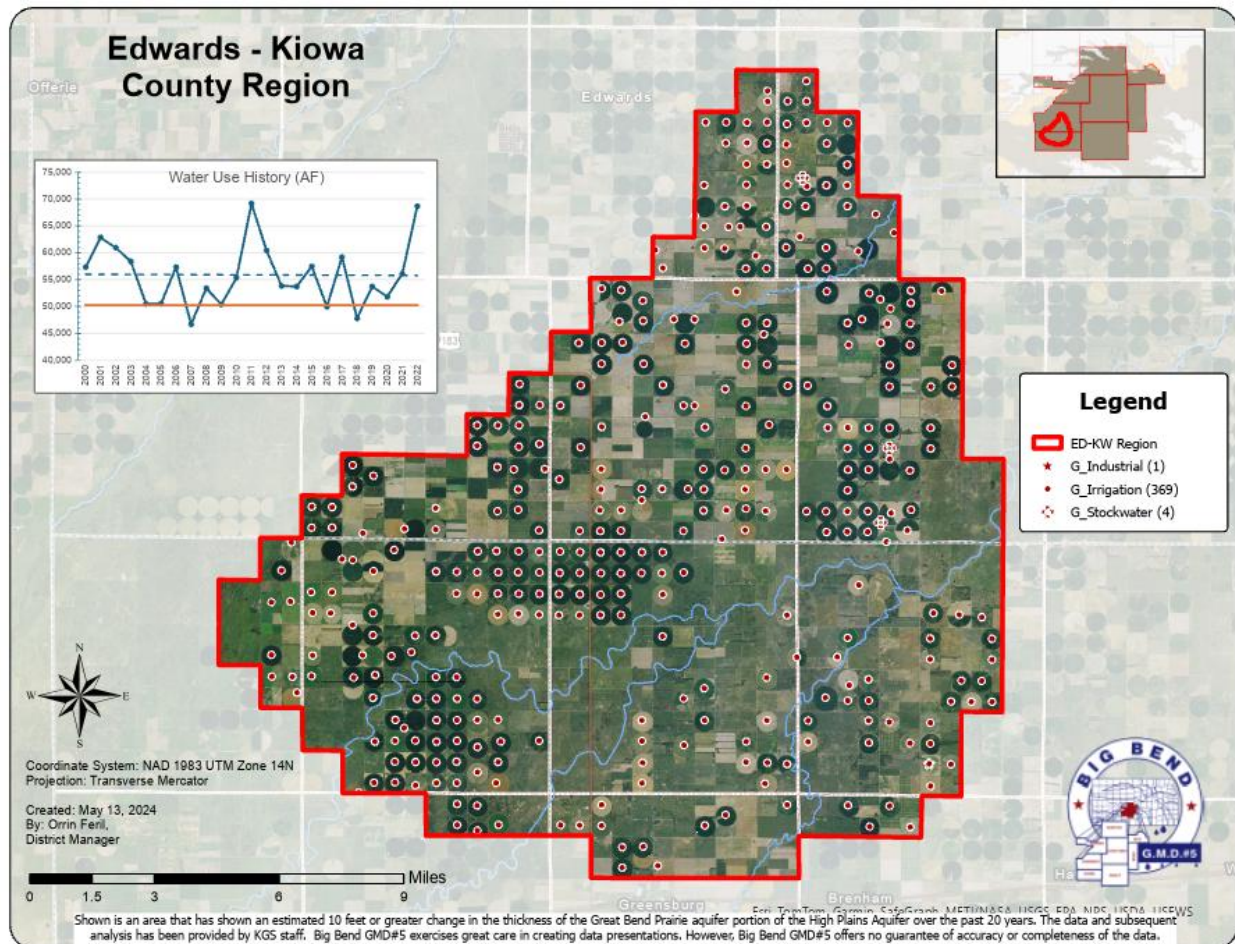

In the early 1990's, with coordination with KGS staff, the District initiated a significant study of the water quality in the eastern half of the District. Specifically, this study identified the interaction between the deep Permian bedrock and the Great Bend Prairie aquifer in which the underlying Permian bedrock actively dissolves into the Great Bend Prairie aquifer (Whittemore D. O., 1993). As a result of this study, the District identified the Mineral Intrusion area and instituted regulations to reduce the up coning of the brackish water into the Great Bend Prairie aquifer through groundwater pumping.

## Supplemental Areas Under Consideration

The District board is in the process of collecting data sets for additional analysis and observation. The District either does not yet have enough data to sufficiently identify the area or considers the area to not currently require action. This does not preclude the District from escalating such areas to Priority Areas of Concern in future revisions of this document. This section will be utilized for identifying active areas being investigated and studied by the District and other partners.

### Water Quantity

#### Edwards-Kiowa County Region

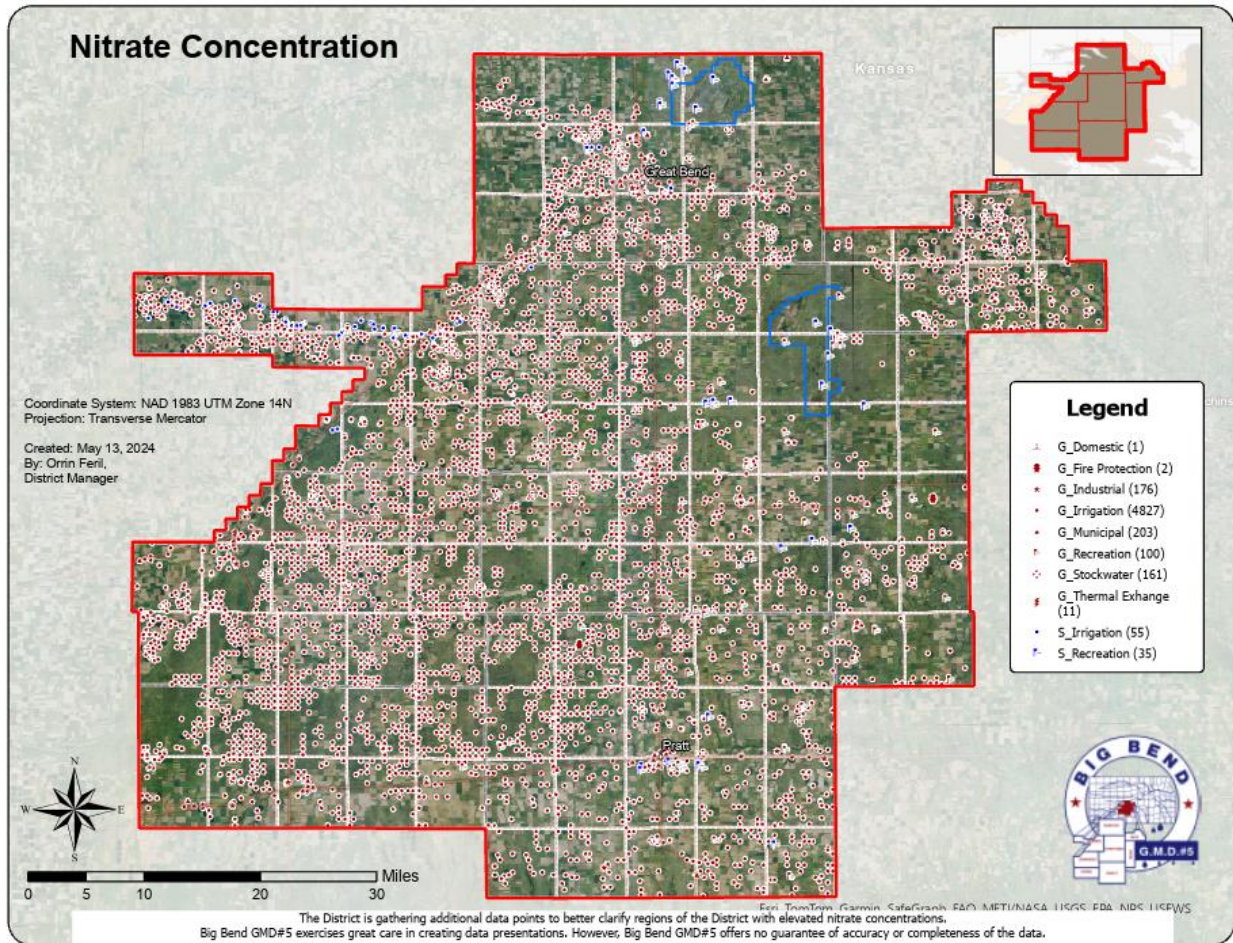

In coordination with Kansas Geological Survey (“KGS”) staff, the District board has held public meetings in Edwards and Kiowa Counties to present water level trends in this area. The District board has identified an area between these two counties that has, over the past 20 years, shown a decline of 10 feet cumulatively. KGS analysis has indicated that this area is experiencing approximately 0.5 ft decline annually. Currently, the District is watching this area to determine if this trend is growing due to escalated pumping from the region or long-term

climate shifts. A major reason for not elevating this area to a priority area of concern is that approximately half of this area is overlapped by the Rattlesnake Creek Region. When the action plan for the Rattlesnake Creek Region is determined, this region's boundary is likely to be modified. As such for the reasons above, it is premature to identify this as a Priority Area of Concern, but it is being considered by the District.

### Water Quality

### Nitrate

Early KGS studies have indicated elevated nitrate concentrations in the groundwater of the District (Townsend & Young, 1995). The District is currently gathering additional data points and coordinating with KDHE to better clarify the regions within the District with elevated nitrate concentrations. Until such a time that a narrower area can be identified, the District is conducting a District-wide effort to inform and encourage all water users to collect and analyze their water wells for nitrate concentrations. The District is providing water bottles for public and private use to bring water samples to the District lab for analysis. The District laboratory is not KDHE-certified, but this provides a quick and economical assessment for the public while

allowing the District to collect water quality data from across the District. Once more data is collected, this can be analyzed to determine focused areas impacted by elevated nitrate concentrations. Since the District has not yet received a sufficient number of samples for analysis, effective identification of Priority Areas for nitrate concentrations is not possible.

### **Activities Related to Priority Areas of Concern**

This section of the District's annual report is reserved for the action plan that is currently being developed by the District board and staff.

### **Action Plan Implementation**

This section of the District's annual report is reserved for the action plan that is currently being developed by the District board and staff.

# ATTACHMENT A

February 2, 2024

To the Board of Directors  
**Big Bend Groundwater Management District No. 5, Stafford, Kansas**  
Stafford, Kansas

We have audited the financial statement of **Big Bend Groundwater Management District No. 5, Stafford, Kansas** for the year ended December 31, 2023, and have issued our report thereon dated February 2, 2024. Professional standards require that we provide you with information about our responsibilities under generally accepted auditing standards, as well as certain information related to the planned scope and timing of our audit. We have communicated such information in our letter to you dated December 11, 2023. Professional standards also require that we communicate to you the following information related to our audit.

### **Significant Audit Matters**

#### *Qualitative Aspects of Accounting Practices*

Management is responsible for the selection and use of appropriate accounting policies. The significant accounting policies used by **Big Bend Groundwater Management District No. 5, Stafford, Kansas** are described in Note 1 to the financial statement. No new accounting policies were adopted and the application of existing policies was not changed during the year ended December 31, 2023. We noted no transactions entered into by the City/County/District during the year for which there is a lack of authoritative guidance or consensus. All significant transactions have been recognized in the financial statement in the proper period.

The financial statement disclosures are neutral, consistent, and clear.

#### *Difficulties Encountered in Performing the Audit*

We encountered no significant difficulties in dealing with management in performing and completing our audit.

#### *Corrected and Uncorrected Misstatements*

Professional standards require us to accumulate all misstatements identified during the audit, other than those that are clearly trivial, and communicate them to the appropriate level of management. Management has corrected all such misstatements. In addition, none of the misstatements detected as a result of audit procedures and corrected by management were material, either individually or in the aggregate, to the financial statement taken as a whole.

#### *Disagreements with Management*

For purposes of this letter, a disagreement with management is a financial accounting, reporting, or auditing matter, whether or not resolved to our satisfaction, that could be significant to the financial statement or the auditors' report. We are pleased to report that no such disagreements arose during the course of our audit.

**Big Bend Groundwater Management District No. 5, Stafford, Kansas**

Page 2

February 2, 2024

*Management Representations*

We have requested certain representations from management that are included in the management representation letter dated February 2, 2024.

*Management Consultations with Other Independent Accountants*

In some cases, management may decide to consult with other accountants about auditing and accounting matters, similar to obtaining a “second opinion” on certain situations. If a consultation involves application of an accounting principle to the District’s financial statement or a determination of the type of auditors’ opinion that may be expressed on that statement, our professional standards require the consulting accountant to check with us to determine that the consultant has all the relevant facts. To our knowledge, there were no such consultations with other accountants.

*Other Audit Findings or Issues*

We generally discuss a variety of matters, including the application of accounting principles and auditing standards, with management each year prior to retention as the District’s auditors. However, these discussions occurred in the normal course of our professional relationship and our responses were not a condition to our retention.

There were no changes to our initial assessment of risks of material misstatements to the financial statement, which were communicated to you in our letter dated January 16, 2024.

*Other Matters*

We were engaged to report on the supplementary information as outlined in the table of contents, which accompany the financial statement but is not RSI. With respect to this supplementary information, we made certain inquiries of management and evaluated the form, content, and methods of preparing the information to determine that the information complies with the regulatory basis of accounting, the method of preparing it has not changed from the prior period, and the information is appropriate and complete in relation to our audit of the financial statement. We compared and reconciled the supplementary information to the underlying accounting records used to prepare the financial statement or to the financial statement itself.

**INTERNAL CONTROLS**

In planning and performing our audit of the financial statement of **Big Bend Groundwater Management District No. 5, Stafford, Kansas** as of and for the year ended December 31, 2023, in accordance with auditing standards generally accepted in the United States of America, we considered the District’s internal control over financial reporting (internal control) as a basis for designing audit procedures that are appropriate in the circumstances for the purpose of expressing our opinion on the financial statement, but not for the purpose of expressing an opinion on the effectiveness of the District’s internal control. Accordingly, we do not express an opinion on the effectiveness of the District’s internal control.

Our consideration of internal control was for the limited purpose described in the preceding paragraph and was not designed to identify all deficiencies in internal control that might be material weaknesses or significant deficiencies and, therefore, material weaknesses or significant deficiencies may exist that were not identified. However, as discussed below, we identified a certain deficiency in internal control that we consider to be a significant deficiency.

**Big Bend Groundwater Management District No. 5, Stafford, Kansas**

Page 3

February 2, 2024

A deficiency in internal control exists when the design or operation of a control does not allow management or employees, in the normal course of performing their assigned functions, to prevent, or detect and correct misstatements on a timely basis. A material weakness is a deficiency, or a combination of deficiencies in internal control, such that there is a reasonable possibility that a material misstatement of the entity's financial statement will not be prevented, or detected and corrected, on a timely basis. We did not identify any deficiencies in internal control that we consider to be material weaknesses.

A significant deficiency is a deficiency, or a combination of deficiencies, in internal control that is less severe than a material weakness, yet important enough to merit attention by those charge with governance. We consider the following deficiency in internal control to be a significant deficiency.

- **Big Bend Groundwater Management District No. 5, Stafford, Kansas** does not have proper segregation of duties necessary to establish a good system of internal control. We understand that the size of the District's accounting and administrative staff and related budget constraints preclude management from hiring additional personnel to achieve proper segregation of duties. However, limited segregation can and should be implemented to reduce the risk of errors or fraud. Where possible, duties should be segregated. Involvement by the Board can also mitigate the risk of errors or fraud. The Board should remain involved in the financial affairs of the District to provide oversight and independent review functions.

We would like to express our appreciation for the opportunity to perform the December 31, 2023 audit for **Big Bend Groundwater Management District No. 5, Stafford, Kansas** and to the employees for the cooperation and assistance given to us during the audit.

*Restriction on Use*

This communication is intended solely for the information and use of management, the Board of Directors, others within the organization, State of Kansas, and is not intended to be, and should not be, used by anyone other than these specified parties.

## INDEPENDENT AUDITORS' REPORT

To the Board of Directors  
**Big Bend Groundwater Management District No. 5, Stafford, Kansas**  
Stafford, Kansas

### **Adverse and Unmodified Opinions**

We have audited the accompanying fund summary statement of regulatory basis receipts, expenditures, and unencumbered cash balances of **Big Bend Groundwater Management District No. 5, Stafford, Kansas**, as of and for the year ended December 31, 2023 and the related notes to the financial statement.

#### *Adverse Opinion on U.S. Generally Accepted Accounting Principles*

In our opinion, because of the significance of the matters discussed in the Basis for Adverse and Unmodified Opinions section of our report, the accompanying financial statement referred to above does not present fairly, in conformity with accounting principles generally accepted in the United States of America, the financial position of the District as of December 31, 2023, or changes in financial position and cash flows thereof for the year then ended.

#### *Unmodified Opinion on Regulatory Basis of Accounting*

In our opinion, the accompanying financial statement referred to above presents fairly, in all material respects, the aggregate cash and unencumbered cash balance of the District as of December 31, 2023, and the aggregate receipts and expenditures for the year then ended in accordance with the financial reporting provisions of the *Kansas Municipal Audit and Accounting Guide* described in Note 1.

### **Basis for Adverse and Unmodified Opinions**

We conducted our audit in accordance with auditing standards generally accepted in the United States of America (GAAS) and the *Kansas Municipal Audit and Accounting Guide*. Our responsibilities under those standards are further described in the Auditor's Responsibilities for the Audit of the Financial Statement section of our report. We are required to be independent of the District, and to meet our other ethical responsibilities, in accordance with the relevant ethical requirements relating to our audit. We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our adverse and unmodified audit opinions.

#### *Matter Giving Rise to Adverse Opinion on U.S. Generally Accepted Accounting Principles*

As discussed in Note 1 of the financial statement, the financial statement is prepared by the District on the basis of the financial reporting provisions of the *Kansas Municipal Audit and Accounting Guide*, which is a basis of accounting other than accounting principles generally accepted in the United States of America. The effects on the financial statement of the variances between the regulatory basis of accounting described in Note 1 and accounting principles generally accepted in the United States of America, although not reasonably determinable, are presumed to be material.

### **Responsibilities of Management for the Financial Statement**

Management is responsible for the preparation and fair presentation of this financial statement in accordance with the *Kansas Municipal Audit and Accounting Guide* as described in Note 1; this includes determining that the regulatory basis of accounting is an acceptable basis for the preparation of the financial statement in the circumstances. Management is also responsible for the design, implementation and maintenance of internal control relevant to the preparation and fair presentation of the financial statement that is free from material misstatement, whether due to fraud or error.

In preparing the financial statement, management is required to evaluate whether there are conditions or events, considered in the aggregate, that raise substantial doubt about the District's ability to continue as a going concern for twelve months beyond the financial statement date, including any currently known information that may raise substantial doubt shortly thereafter.

### **Auditors' Responsibilities for the Audit of the Financial Statement**

Our objectives are to obtain reasonable assurance about whether the financial statement as a whole is free from material misstatement, whether due to fraud or error, and to issue an auditor's report that includes our opinions. Reasonable assurance is a high level of assurance but is not absolute assurance and therefore is not a guarantee that an audit conducted in accordance with GAAS will always detect a material misstatement when it exists. The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control. Misstatements are considered material if there is a substantial likelihood that, individually or in the aggregate, they would influence the judgment made by a reasonable user based on the financial statement.

In performing an audit in accordance with GAAS, we:

- exercise professional judgment and maintain professional skepticism throughout the audit.
- identify and assess the risks of material misstatement of the financial statement, whether due to fraud or error, and design and perform audit procedures responsive to those risks. Such procedures include examining, on a test basis, evidence regarding the amounts and disclosures in the financial statement.
- obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the District's internal control. Accordingly, no such opinion is expressed.
- evaluate the appropriateness of accounting policies used and the reasonableness of significant accounting estimates made by management, as well as evaluate the overall presentation of the financial statement.
- conclude whether, in our judgment, there are conditions or events, considered in the aggregate, that raise substantial doubt about the District's ability to continue as a going concern for a reasonable period of time.

We are required to communicate with those charged with governance regarding, among other matters, the planned scope and timing of the audit, significant audit findings, and certain internal control-related matters that we identified during the audit.

**Supplementary Information**

Our audit was conducted for the purpose of forming an opinion on the fund summary statement of regulatory basis receipts, expenditures and unencumbered cash balances (basic financial statement) as a whole. The summary of regulatory basis expenditures – actual and budget and individual fund schedules of regulatory basis receipts and expenditures – actual and budget (Schedules 1 and 2 as listed in the table of contents) are presented for purposes of additional analysis and are not a required part of the basic financial statement; however, are required to be presented under the provisions of the *Kansas Municipal Audit and Accounting Guide*. Such information is the responsibility of management and was derived from and relates directly to the underlying accounting and other records used to prepare the basic financial statement. The information has been subjected to the auditing procedures applied in the audit of the basic financial statement and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the basic financial statement or to the basic financial statement itself, and other additional procedures in accordance with auditing standards generally accepted in the United States of America. In our opinion, the accompanying supplementary information is fairly stated, in all material respects, in relation to the basic financial statement as a whole, on the basis of accounting described in Note 1.

**Big Bend Groundwater Management District No. 5, Stafford, Kansas'** basic financial statement for the year ended December 31, 2022 (not presented herein), was audited by VonFeldt, Bauer & VonFeldt, Chtd. who merged with AdamsBrown, LLC as of November 1, 2023, whose report dated February 10, 2023, expressed an unmodified opinion on the basic financial statement. The 2022 basic financial statement and the other auditor's report are not presented herein, but are available in electronic form from the web site of the Kansas Department of Administration at the following link <https://admin.ks.gov/offices/accounts-reports/local-government/municipal-services/municipal-audits>. The report of the other auditors dated February 10, 2023, stated that the individual fund schedules of regulatory basis receipts and expenditures – actual and budget for the year ended December 31, 2022 was subjected to the auditing procedures applied in the audit of the 2022 basic financial statement and certain additional procedures, including comparing and reconciling such information directly to the underlying accounting and other records used to prepare the 2022 basic financial statement or to the 2022 basic financial statement itself, and other additional procedures in accordance with auditing standards generally accepted in the United States of America and in their opinion, was fairly stated in all material respects in relation to the basic financial statement as a whole for the year ended December 31, 2022, on the basis of accounting described in Note 1.

# BIG BEND GROUNDWATER MANAGEMENT DISTRICT NO. 5, STAFFORD, KANSAS

Notes to Financial Statement

December 31, 2023

---

## NOTE 1 – SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

**Big Bend Groundwater Management District No. 5, Stafford, Kansas** has established a uniform system of accounting maintained to reflect compliance with the applicable laws of the State of Kansas. The accompanying financial statement is presented to conform to the cash basis and budget laws of the State of Kansas, which is a comprehensive basis of accounting other than accounting principles generally accepted in the United States of America. The following is a summary of such significant policies.

### **Financial Reporting Entity**

The District is a municipal corporation governed by an elected nine-member board. A related municipal entity is an entity established to benefit the District and/or its constituents. The District has no related municipal entities.

### **Basis of Presentation – Fund Accounting**

The accounts of the District are organized and operated on the basis of funds. In governmental accounting, a fund is defined as an independent fiscal and accounting entity with a self-balancing set of accounts. Fund accounting segregates funds according to their intended purpose and is used to aid management in demonstrating compliance with finance related legal and contractual provisions. The minimum number of funds is maintained consistent with legal and managerial requirements.

The following types of funds comprise the financial activities of the District for the years ended December 31, 2023.

### **Regulatory Basis Fund Types**

**General Fund** – the chief operating fund. Used to account for all resources except those required to be accounted for in another fund.

### **Basis of Accounting**

*Regulatory Basis of Accounting and Departure from Accounting Principles Generally Accepted in the United States of America.* The KMAAG regulatory basis of accounting involves the recognition of cash, cash equivalents, marketable investments, and certain accounts payable and encumbrance obligations to arrive at a net unencumbered cash and investments balance on a regulatory basis for each fund, and the reporting of changes in unencumbered cash and investments of a fund resulting from the difference in regulatory basis receipts and regulatory basis expenditures for the fiscal year. All recognized assets and liabilities are measured and reported at cost, unless they have been permanently impaired and have no future cash value or represent no future obligation against cash. The KMAAG regulatory basis does not recognize capital assets, long-term debt, accrued receivables and payables, or any other assets, liabilities or deferred inflows or outflows, other than those mentioned above.

The District has approved a resolution that is in compliance with K.S.A. 75-1120a(c), waiving the requirement for application of generally accepted accounting principles and allowing the District to use the regulatory basis of accounting.

### **Reimbursements**

The District records reimbursable expenditures in the fund that makes the disbursement and records reimbursements as a receipt to the fund that receives the reimbursement. For purposes of budgetary comparisons, the expenditures are properly offset by the reimbursements under KMAAG regulatory basis of accounting.

## BIG BEND GROUNDWATER MANAGEMENT DISTRICT NO. 5, STAFFORD, KANSAS

Notes to Financial Statement

December 31, 2023

---

### NOTE 2 – BUDGETARY INFORMATION

Kansas statutes require that before any assessment can be made, the District's board must prepare a budget for the upcoming year to the eligible voters of the **Big Bend Groundwater Management District No. 5, Stafford, Kansas**, at a budget hearing. The budget hearing must be published in the newspaper in the District, at least 28 days prior to the meeting. After the budget hearing, the Board will adopt the proposed budget by resolution as well as determine the amount of land assessment or user charge, or both, that will be needed to support the adopted budget.

The Board can increase the originally adopted budget for previously unbudgeted increases in revenue. There were no budget amendments for this year.

The statutes permit transferring budgeted amounts between line items within an individual fund. However, such statutes prohibit expenditures in excess of the total amount of the adopted budget of expenditures of individual funds. Budget comparison schedules are presented for each fund showing actual receipts and expenditures compared to legally budgeted receipts and expenditures.

All legal annual operating budgets are prepared using the regulatory basis of accounting, in which revenues are recognized when cash is received and expenditures include disbursements, accounts payable, and encumbrances, with disbursements being adjusted for prior year's accounts payable and encumbrances. Encumbrances are commitments by the District for future payments and are supported by a document evidencing the commitment, such as a purchase order or contract. Any unused budgeted expenditure authority lapses at year end.

### NOTE 3 – DEPOSITS AND INVESTMENTS

**Big Bend Groundwater Management District No. 5, Stafford, Kansas** follows the practice of pooling cash and investments of all funds. Each fund's portion of total cash and investments is summarized by fund category in the summary statement of receipts, expenditures and unencumbered cash.

K.S.A. 9-1401 establishes the depositories which may be used by the District. The statute requires banks eligible to hold the District's funds have a main or branch bank in the county in which the District is located, or in an adjoining county if such institution has been designated as an official depository, and the banks provide an acceptable rate of return on funds. In addition, K.S.A. 9-1402 requires the banks to pledge securities for deposits in excess of FDIC coverage. The District has no other policies that would further limit interest rate risk.

K.S.A. 12-1675 limits the District's investment of idle funds to time deposits, open accounts, and certificates of deposit with allowable financial institutions; U.S. government securities; temporary notes; no-fund warrants; repurchase agreements; and the Kansas Municipal Investment Pool. The District has no investment policy that would further limit its investment choices.

#### Custodial Credit Risk - Deposits

Custodial credit risk is the risk that in the event of a bank failure, the District's deposits may not be returned to it. State statutes require the District's deposits in financial institutions to be entirely covered by federal depository insurance or by collateral held under a joint custody receipt issued by a bank within the State of Kansas, the Federal Reserve Bank of Kansas City, or the Federal Home Loan Bank of Topeka, except during designated "peak periods" when required coverage is 50%. The District does not use "peak periods". All deposits were legally secured at December 31, 2023.

## BIG BEND GROUNDWATER MANAGEMENT DISTRICT NO. 5, STAFFORD, KANSAS

Notes to Financial Statement

December 31, 2023

---

At December 31, 2023, the District's carrying amount of deposits was \$4,312,943 and the bank balance was \$4,320,715. The bank balance was held by one bank resulting in a concentration of credit risk. Of the bank balance, \$4,320,715 was covered by federal depository insurance.

### Custodial Credit Risk- Investments

For an investment, this is the risk that, in the event of the failure of the issuer or counterparty, the District will not be able to recover the value of its investments or collateral securities that are in the possession of an outside party. State statutes require investments to be adequately secured. The District had no investments at December 31, 2023.

### NOTE 4 – LITIGATION

**Big Bend Groundwater Management District No. 5, Stafford, Kansas** is a party to various legal proceedings which normally occur in governmental operations. These legal proceedings are not likely to have a material financial impact on the affected funds of the District.

### NOTE 5 – RISK MANAGEMENT

**Big Bend Groundwater Management District No. 5, Stafford, Kansas** is exposed to various risks of loss related to torts; damage to and destruction of assets; business interruptions; errors and omissions; employee injuries and illnesses; natural disasters; and employee health, dental and accident benefits. Commercial insurance coverage is purchased for claims arising from such matters other than related to employee health benefits. Settled claims have not exceeded this commercial coverage in any of the three preceding years. There have not been significant reductions in coverage from prior years.

### NOTE 6 – OTHER POST EMPLOYMENT BENEFITS

As provided by K.S.A. 12-5040, **Big Bend Groundwater Management District No. 5, Stafford, Kansas** allows retirees to participate in the group health insurance plan. While each retiree pays the full amount of the applicable premium, conceptually, the District is subsidizing the retirees because each participant is charged a level of premium regardless of age. However, the cost of this subsidy has not been quantified in this financial statement.

Under the Consolidated Omnibus Budget Reconciliation Act (COBRA), the District makes health care benefits available to eligible former employees and eligible dependents. Certain requirements are outlined by the federal government for this coverage. The premium is paid in full by the insured.

### NOTE 7 – GRANTS AND SHARED REVENUES

**Big Bend Groundwater Management District No. 5, Stafford, Kansas** participates in numerous state and federal programs, which are governed by various rules and regulations for the grantor agencies. Costs charged to the respective grant programs are subject to audit and adjustment by the grantor agencies; therefore, to the extent that the District has not complied with the rules and regulations governing the grants, refunds of any money received may be required. In the opinion of the District, any liability for reimbursement, which may arise as the result of the audit, is not believed to be material.

### NOTE 8 – COMPENSATED ABSENCES

#### Annual Leave

Full time employees accrue leave at the rate of eight hours per month for years of employment one through nine, ten hours per month for years ten through nineteen, and thirteen hours for years twenty and

**BIG BEND GROUNDWATER MANAGEMENT DISTRICT NO. 5, STAFFORD, KANSAS**

Notes to Financial Statement

December 31, 2023

---

over. Annual leave may accumulate up to fifteen days plus one day for each year of employment. Any leave accumulated over this figure as of January 1 of each year will be lost. Payment of accrued annual leave time will be made at the time of termination providing the employee has been employed for a period of one year or more.

**Sick Leave**

Full time employees receive sick leave of one status day per full working month of employment. Sick leave will be allowed to accumulate to a maximum of 480 hours. Sick leave accrued in excess of 480 hours as of December 31 of each year shall be paid at one-half the hourly rate of an employee's salary for that calendar year. No payment will be made for accrued sick leave upon termination of employment.

**Personal Leave**

Full time employees receive three status days of personal leave annually. Personal leave shall not accumulate. Payment of accrued personal leave time will not be made at the time of termination of employment.
